- Facilitating refrigerant flow with minimal pressure loss
- Ensuring proper phase change and heat transfer
- Providing a reliable and leak-proof pathway
- Allowing for serviceability and maintenance access

Types of Refrigerant Piping

Refrigerant piping systems are generally categorized into:

- Suction lines: Carry low-pressure vapor from the evaporator to the compressor
- Discharge lines: Convey high-pressure vapor from the compressor to the condenser
- Liquid lines: Transport high-pressure liquid refrigerant from the condenser to the expansion device
- Oil lines: Circulate lubricating oil within the system

Each piping type has specific design considerations based on pressure, temperature, and flow characteristics.

Design Principles for Refrigerant Piping
